CHD Echo Reporting, Reimagined.
Built for the Pediatric Heart Team.

ASCEND Cardiovascular created a platform that's different. One that reflects how pediatric cardiologists think, diagnose, and collaborate. Strategically developed for CHD care, it's a solution that transforms documentation into a true clinical workflow advantage.

What Sets Us Apart:

Fully Integrated Workflow
Seamlessly **connects** fetal, pediatric, adult echo data with interventional data, AI-based 3D model data, and multi-modality structured reporting, all in one unified platform from **fetal to adulthood**.

CHD-Specific Intelligence
Over 120 built-in congenital disease classifications with full and focused templates and smart **carry-forward** fields to reduce clicks, ensure consistency, and accelerate documentation.

Modernized Mullins Diagrams
Automated selection and diagram carry-forward features, paired with **robust tools** to draw, annotate, and complete diagrams for clearer communication of complex anatomy, diagnoses, and interventions.
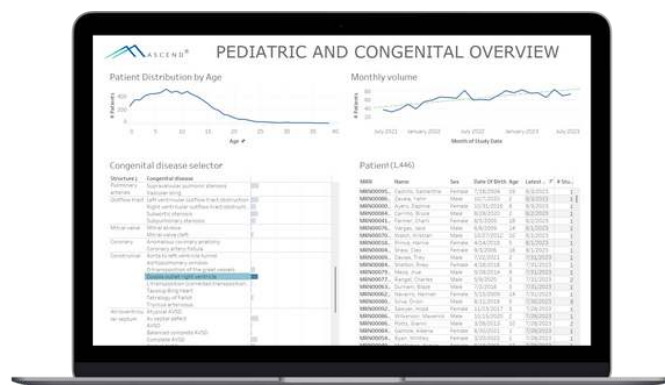

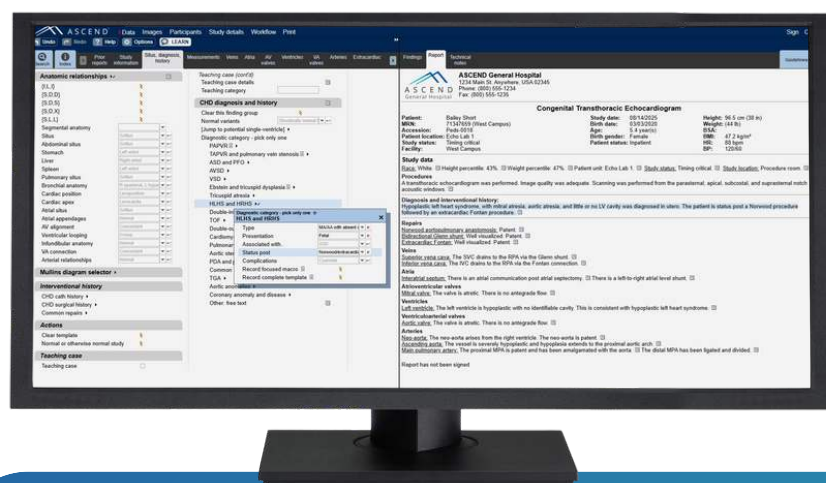

Structured Data That Works for You
Comprehensive and deeply detailed **CHD data** that supports accreditation efforts, research, and outcomes analysis across the enterprise.

Imaging Telepresence
Virtualize and extend echocardiography **expertise** by enabling real-time remote collaboration and oversight, bringing specialists to the study no matter where the exam takes place.

Purpose-Built For CHD
Designed For The Way You Work
