Introduction

The Welch Allyn Q-Stress system data elements that are supported for import into ASCEND are listed in the following tables where

- Finding label is the label used to identify the finding within the knowledge base
- Q-Stress XML location is an XPath expression for the data in the Q-Stress XML. The actual value resides in child element named “Value”
- Value is the string text of the XML element or attribute that must be present in Q-Stress to trigger import

Scope of Q-Stress Import

Patient Demographics

Finding label	Q-Stress XML location	Value	Comments
Age	Summary/EvIDPatientAge		Age in years
Birthdate*	Summary/EvIDPatientDOBISO		yyyy-mm-dd format
Study date	Summary/EvIDStudyAcqDateISO		yyyy-mm-dd format
Study time	Summary/EvIDStudyAcqTimeISO		hh:mm:ss format hh.mm.ss format
Gender	Summary/EvIDPatientGender	FEMALE	
Gender	Summary/EvIDPatientGender	MALE	
Height*	EvIDPatientHeightValue		Inches or cm (see note)
Weight*	EvIDPatientWeightValue		Pounds or kilograms (see note)

* Note: ASCEND supports the Q-Stress software for the Q-Exchange platform version 3.6 (Welch Allyn Q-Stress software versions 3.51, 4.0.1, 4.5, 6.1.0, and 6.2). Other Q-Exchange platforms like Q-Exchange version 1.0 are not supported. Height, Weight and Birthdate are exceptions where Q-Exchange version 1.0 fields are also supported.

Q-Exchange v3.6

- EvIDPatientDOBISO
- EvIDPatientHeightValue
- EvIDPatientWeightValue

Q-Exchange v1.0

- EvIDPatientBirthdate
- EvIDPatientHeight
- EvIDPatientWeight

Comments	Tabular/EvIDComment**		

* The recovery stages exported from the device can be filtered to import only the first and last recovery stage into the ASCEND report versus all the recovery stages.

** Comments from multiple trend plots (observations) within a stage that are aggregated in the stage and displayed by timestamp. Aggregation excludes the recovery stages because the user can un-filter to display all the recovery stages in the report, if comment aggregation is desired.

Rate units (mcg/kg/min) **, or Dose units (mg)	---		
Time into phase	Tabular/Stage/EvIDExTotalStageTime		
HR	Tabular/Stage/EvIDLogCurrentHR	bpm	
Systolic BP	Tabular/Stage/EvIDLogCurrentBP	mmHg	
Diastolic BP	Tabular/Stage/EvIDLogCurrentBP	mmHg	
Comments	Tabular/EvIDComment***		

* Welch Allyn Q-Stress has a limitation and only exports the pharmacological stress test protocol name, but it doesn't support the export of rates/doses for separate stages of a pharmacological stress table. The ASCEND device interface replaces stages 1-n (exported from the device) with the medication name plus the units but not the medication rate/dose.

* The recovery stages exported from the device can be filtered to import only the first and last recovery stage into the ASCEND report versus all the recovery stages.

** Device interface configuration states exist to switch the infusion rate units for Adenosine, Dipyridamole, and Dobutamine from µg/kg/min to mg/min.

*** Comments from multiple trend plots (observations) within a stage are aggregated in the stage and displayed by timestamp.
